CAS — Customer Application Support

Get Fast and Reliable Answers to Your Toughest Problems

Our CAS Team is the metalworking industry's leading help desk resource for tooling application solutions and problem resolution.

Easy Access to Proven Metalworking Expertise!

Kennametal Application Engineers assist customers and engineering groups throughout the world with expert tool selection and application recommendations for the entire range of Kennametal tooling.

Spare Parts & Accessories Information

Lost a screw? Have to replace worn-out clamping wedges? Need to find and re-order those spare parts?

Are you in need of some accessories, like a torque wrench or coolant shower plate? These tools are at your fingertips! Go to kennametal.com and find what you need in seconds. Enter the catalogue number of the corresponding tool, and it will display.

1 STEP 1 Enter the tool catalogue number here

Mill 16™
Shell Mills
Features and Benefits

- Productivity booster for machining cast iron materials.
- Insert with 16 cutting edges.

SPECIFICATIONS
Mill 16 • Shell Mills • Wedge Clamping

Mill 4™ -12KT

Tangential Shoulder Milling

Materials

Applications

Shoulder Milling

kennametal.com/Mill4-12KT

Mill 4-12KT requires up to 15% less horsepower, enabling increased feed rates, even on small machines.

The patented insert design — featuring a triangular shaped margin — provides unprecedented stability in steel and cast iron applications.

Excellent floor finishes due to minimal axial runout.

With 7 grades, 7 corner radii, and depth-of-cut range up to 12mm, the programme offers versatility to cover many shoulder milling applications.

Patented margin design ensures unprecedented stability.

Tangentially mounted inserts give easy access to insert locking screws.

Coarse and medium pitch cutters with internal coolant supply.

Strong cutter body and strong cutting edges due to tangential design concept.

Comparison

Radially Mounted

- Requires large pocket; reduces the core size of the cutter.
- Allows very small diameter cutter bodies.
- Access to insert screw can be tough.

Tangentially Mounted

- A shallow pocket allows for large core size of the cutter.
- Very strong cutting edge.
- Easy access to insert screw.

Trochoidal Milling

Trochoidal Milling:
Ball Nose

HARVI II Trochoidal • TCDE 5 x D
See page 21.

Kennametal.com/HARVI

The HARVI series offers exceptionally high feed and speed rate capabilities resulting in unmatched metal removal rates.

HARVI I

For roughing and finishing with one tool.

HARVI I Taper Ball Nose

Designed for roughing and finishing in 5-axis machining.

HARVI II

For roughing and finishing with highest metal removal rate capability.

HARVI II Trochoidal

Designed for dynamic milling in stainless, titanium, and steel using CAM tool path generation software. With chip splitters. Now available in 3 x D and 5 x D.

Intermediate diameters are available upon request as custom solutions.

Pullout protection through Safe-Lock™ by Haimer® available.

Proprietary, unequal flute spacing reduces vibration and improves surface finish.

Unique core design provides exceptional tool stability.

HARVI II Long

Ideal for finishing long walls with exceptional straightness. Up to 5 x D.

HARVI III

With eccentric relief. Perfect for semi-finishing and finishing of titanium.

HARVI III Taper Ball Nose

Designed for 5-axis machining. Offers same feed-per-tooth rates as 4-fluted tools.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

For better surface finish, reduce feed per tooth.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameter.

For better surface finish, reduce feed per tooth.

Turret Adapted Clamping Units

Driven Unit • KM™

Driven Unit • ER™

Static Unit • KM

kennametal.com/TACU

Turret adapted clamping units provide unmatched performance and guaranteed productivity improvement.

Ensure optimised machine utilisation by increasing repeatability and reducing setup times.

Turret adapted clamping units are designed to fit specific machine-tool turret interfaces.

The offering covers various machine models from leading machine-tool builders such as DOOSAN™, HAAS™, HWACHEON™, HYUNDIA WIA, Mazak™, DMG Mori, and OKUMA™.

- Standard portfolio features static blocks and driven tools for KM™ sizes 32, 40, 50, and 63.
- **NEW:** Driven tools for ER sizes 25, 32, and 40.
- Driven tools up to 12,000 RPM. Gear ratio 1:1.
- Designed to fit machine-tool specific turret interfaces.
- VDI mounted units for easy handling.
- Bolt mounted units (BMT) for high rigidity.
- Available with internal and external coolant supply.

TACU • TOOL SELECTION GUIDE

1 STEP 1: Find machine tool manufacturer.

2 STEP 2: Choose machine tool model.

3 STEP 3: Find machine mount code (MMC).

1

VDI Turret Blocks

- Quick change with single clamping wedge.
- Tool alignment by fine adjustment.
- VDI orientation according to machine specification.

BMT Turret Blocks

- 4 bolts to mount on to the turret.
- Additional alignment not required.
- Offers the highest rigidity, which is ideal for a wide range of applications.

Coolant supply options for static and driven tools:

**Driven tools with internal
and external coolant**

Driven tool external coolant

Static tool internal coolant

NOTE: Driven tools with internal coolant cannot be run dry and require a minimum 50 micron coolant filtration.
Gear ratio is 1:1, unless specified otherwise.
Please visit kennametal.com to download detailed drawings and models.

TOOLING LAYOUT FOR CNC-LATHE WITH DRIVEN AND STATIC TOOLS

Need more help? Please fill in the information below and we can get you the answers you need.

Tooling Layout for CNC-Lathe with Driven and Static Tools			
Machine Type (for example: DMG Mori, Mazak™, Okuma™...):			
Model/Type (for example: NL2000, MP6200Y, LT300...):		Date of construction:	
Shank Ø (DIN 69880 or relevant)	VDI:		BMT:
	☐ 16mm		☐ 55mm
	☐ 20mm		☐ 65mm
	☐ 30mm		☐ 75mm
	☐ 40mm		☐ 85mm
☐ _____		☐ _____	
Turret Type		☐ Star	☐ Disc
		☐ Crown	
Is the turret an original type?		☐ Yes	☐ No
If no, which turret type?		☐ Sauter	☐ Baruffaldi
		☐ Diplomatic	☐ Others: _____
Turret type number (for example: Sauter 05.473.516):			
Tool positions on turret?		☐ 12	☐ 20
		☐ 16	☐ _____
Quantity of driven positions?		Quantity:	
If more turrets are used, please specify turret-no.:		Turret-Number:	
Which kind of drive (coupling, interface)? (f.e.: DIN 1809, 5480, 5482)		DIN:	
			
☐ Baruffaldi TOEM	☐ DIN 1809	☐ DIN 5480	☐ DIN 5482
			
		☐ 1 Step Front Coupling	☐ 2 Step Front Coupling
			
		☐ Bevel Gear	
Which version is required?		☐ (R) right version	
		☐ (L) left version	
		☐ (RL) double serration	
Ratio (more speed)	☐ i = 1:1	☐ i = 1:2	☐ i = 1:3
(more torque)	☐ i = 2:1	☐ i = 3:1	☐ i = 1:4
			☐ i = 1:5
			☐ i = 1 : _____
			☐ i = _____ : 1
Rotating direction		☐ cw (in) – cw (out)	
		☐ cw (in) – ccw (out)	
Orientation of axial tools		☐ standard	
NOTE: For machines with star-turret for axial processing, you need RADIAL TOOLS and inverse		☐ offset of _____mm	
Orientation of radial tools		☐ standard	
NOTE: For machines with star-turret for radial processing, you need AXIAL TOOLS and inverse		☐ back offset of _____mm	
Which style of toolholding do you prefer?		☐ ER (ESX)	☐ Shell Mill
		☐ TAP	☐ Weldon®/WN
		☐ ABS	☐ KM™
		☐ PSC	☐ HSK

Remarks: (for example: inner coolant supply, a.s.o. ...)			

Threaded Solid ER Collets

Adapt Screw-On Milling Cutters
to CNC Lathes

kennametal.com/ER-Solid-Collets

Threaded solid ER collets turn CNC lathe machines into multitasking machines by providing access of any small diameter screw-on milling cutter to ER driven units.

These new solid ER collets increase machine utilisation through modular flexibility.

The short projection from the face of the collet nut provides rigid toolholding and a smaller required machine envelope.

Compatible with all standard ER collet chucks and ER driven units.

INDEXABLE MILLING

		wear resistance ← → toughness											
Coating		Grade Description		05	10	15	20	25	30	35	40	45	
KC522M		Coated carbide grade with a TiAlN (PVD) coating. KC522M is engineered to provide better performance in general machining of high-temperature alloys and stainless steel. KC522M resists breakage and offers improved wear resistance and increased strength.	P										
			M										
			K										
			S										
KCK15		Coated carbide grade with CVD multilayer coating (TiN/MT TiCN/Al ₂ O ₃) and advanced Beyond™ post-coat treatment. KCK15 is a wear-resistant grade with balanced toughness for general milling of cast irons at higher speeds. Best results in dry, but can also be used wet.											
			K										
KCK20		A new PVD multilayer TiAlN + AlCrN coated carbide with an excellent combination of wear resistance and coating strength. The KCK20 grade is specifically engineered to maximise coating adhesion and edge strength, making this grade ideal in wet interrupted cutting of grey and ductile irons, and can also be used in dry conditions. It can be used in a wide range of applications, from finishing to roughing, to maximise productivity wherever strength and reliability are needed.											
			K										
KCPK30		Coated carbide grade with CVD multilayer (TiN/TiCN/Al ₂ O ₃) and advanced Beyond™ post-coat treatment. Substrate is very tough. KCPK30 has a wide application area in general and roughing milling of steels and cast irons. Performs best dry, but can also be used wet.	P										
			K										
KCPM40		Coated carbide grade with an advanced PVD TiAlN/AlCrN coating. Tough substrate with excellent capability at higher temperatures. KCPM40™ is the first choice for milling steel and stainless steel. Good thermal shock resistance makes this grade ideal for both wet and dry machining. Primarily for use in general and heavy machining.	P										
			M										
KCSM40		Coated carbide grade with an advanced PVD TiAlN/TiN coating. Premium substrate with newly developed binder composition. KCSM40 is a high-performance grade for titanium, super alloys, and stainless steel. High thermal shock resistance of the substrate makes this grade ideal for wet machining. First choice for roughing and unsuitable cutting conditions.	M										
			S										
KC725M		Coated carbide grade with an advanced PVD TiAlN coating. KC725M is a high-performance grade for milling steel, stainless steel, and ductile cast iron. The good thermal shock resistance of the substrate makes this grade ideal for both wet and dry machining. Primarily for use in general and heavy machining.	P										
			M										
			S										

SOLID CARBIDE END MILLING

		wear resistance ← → toughness									
Coating	Grade Description		05	10	15	20	25	30	35	40	45
KC643M 	Coated fine-grain grade with PVD multilayer (AlTiN). KC643M™ is a very thin and hard PVD coating particularly suited for cutting steel, cast iron, stainless steel (wet), and titanium (wet). This grade can be used for materials with hardness up to 52 HRC.	P

METALCUTTING SAFETY

IMPORTANT SAFETY INSTRUCTIONS

Read before using the tools in this catalogue!

Projectile and Fragmentation Hazards:

Modern metalcutting operations involve high spindle and cutter speeds and high temperatures and cutting forces. Hot metal chips may fly off the workpiece during metalcutting. Although cutting tools are designed and manufactured to withstand high cutting forces and temperatures, they can sometimes fragment, particularly if they are subjected to over-stress, severe impact, or other abuse.

To avoid injury:

- Always wear appropriate personal protective equipment, including safety goggles, when operating metalcutting machines or working nearby.
- Always make sure all machine guards are in place.

Breathing and Skin Contact Hazards:

Grinding carbide or other advanced cutting tool materials produces dust or mist containing metallic particles. Breathing this dust or mist — especially over an extended period — can cause temporary or permanent lung disease or make existing medical conditions worse. Contact with this dust or mist can irritate eyes, skin, and mucous membranes and may make existing skin conditions worse.

To avoid injury:

- Always wear breathing protection and safety goggles when grinding.
- Provide ventilation control and collect and properly dispose of dust, mist, or sludge from grinding.
- Avoid skin contact with dust or mist.

For more information, read the applicable Material Safety Data Sheet provided by Kennametal and consult General Industry Safety and Health Regulations, Part 1910, Title 29 of the Code of Federal Regulations.

These safety instructions are general guidelines. Many variables affect machining operations. It is impossible to cover every specific situation. The technical information included in this catalogue and recommendations on machining practices may not apply to your particular operation. For more information, consult the Kennametal Metalcutting Safety booklet, available free from Kennametal at 724 539 5747 or fax 724 539 5439. For specific product safety and environmental questions, contact our Corporate Environmental Health and Safety Office at 724 539 5066 or fax 724 539 5372.
